DETAILED ACTION

Allowable Subject Matter

- 1. Claims 1-33 are allowed.
- 2. The following is an examiner's statement of reasons for allowance:
 - a) Claim 1 is nonobvious because it requires treating the substrate using cyclic voltammetry to provide a fractal dimension of greater than about 2 before contacting the substrate with dithiol molecules.

Black et al. ("Synthesis of a Rigid Dimethoxynapthalene-Spacer-Dithiol Which Spontaneously attaches to Au and Pt Electrodes: Properties of Monolayer Films in NonAqueous Solvents," *J. Am. Chem. Soc.* 1993, 115, 7924-7925) bind dithiol molecules to the electrode substrate before performing cyclic voltammetry (second full paragraph in the second column on page 7924). It would not have been obvious to perform cyclic voltammetry before contacting the substrate with the dithiol molecules because the dithiol molecules spontaneously bind to the electrode substrate (title) and Back et al. only perform cyclic voltammetry to characterize the electrode (Figure 1), not to provide a fractal dimension greater than about 2 to the substrate. Black et al. also do not disclose

using their electrode for accumulating an analyte from a target sample or detecting an analyte.

Maskus et al. ("Synthesis and Characterization of Redox-Active Metal Complexes Sequentially Self-assembled onto Gold Electrodes via a New Thiol-Terpyridine Ligand," Langmuir 1996, 12, 4455-4462) perform cyclic voltammetry to clean the electrode substrate, not to provide a fractal dimension greater than about 2 to the substrate (Procedures on page 4456). In fact, Maskus et al. teach away from providing a fractal dimension greater than about 2 to the substrate because they polish the electrode to achieve a very smooth substrate surface (Scheme 1 and Procedures on page 4456). Also, Markus et al. only disclose binding thiol-terpyridine to the electrode substrate not a dithiol molecule, and do not disclose using their electrode for accumulating an analyte from a target sample or detecting an analyte (Markus et al. mention electrocatalysis and nonlinear optics in the Conclusions on page 4462).

Porter et al. (US 5,827,417) apply a cleaning voltage and then a depositing voltage to the electrode substrate (col. 6, ln. 54 – col. 7, ln. 17). The depositing voltage is applied throughout the depositing step, while the thiolate coating is formed. Neither the cleaning voltage nor the depositing voltage is disclosed as providing a fractal dimension greater than about 2 to the substrate. Since the cleaning voltage is for completely removing impurities from the substrate surface (col. 6, ln. 65 – col. 7, ln. 6) one with ordinary skill in the art would expect it to smoothen the surface of the electrode substrate. Also, the cleaning voltage and the depositing voltages are fixed voltages (col. 6, ln. 65 – col. 7, ln. 10). Cyclic voltammetry is only performed as a preliminary step to calculate

Application/Control Number: 10/640,984 Page 4

the level of coverage of the thiolate monolayer on the electrode substrate for a particular voltage and it is performed while the thiol molecules are contacted with the substrate, as is the cleaning step (col. 6, ln. 54 – col. 7, ln. 10). During cyclic voltammetry thiolate is deposited and then removed (col. 7, ll. 28-53), so an electrode having thiol group attached thereto and capable of binding an analyte is not produced by cyclic voltammetry. A constant voltage is used when the thiolate is actually deposited to produce an analysis

b) Claims 2-33 depend directly or indirectly from allowable claim 1.

electrode (col. 7, ll. 42-53 and claim 1).

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALEX NOGUEROLA whose telephone number is (571) 272-1343. The examiner can normally be reached on M-F 8:30 - 5:00.
